Education

A Pretty Good CS School

B.S. and M.Eng. in Computer Science

Class of 2020, GPA: 5.0/5.0

Coursework

Intro to Python

Quantum Blockchain

Deep Learning

Intro to Buzzwords

Advanced Quantum Blockchain

JavaScript: The Good Parts

How to Node.js

Awards

Most APIs Crammed into a Single Web Application, Some Hackathon

Random Sponsor Prize, Some Other Hackathon

Registered User, CodeForces

Worked On Some Practice Problems, USA Computing Olympiad

Member, Random Honor Societies that Fill up Resumes

Leadership

Organizer, My School's Hackathon That's Way Better Than Yours

President, Some Business Club to Network With People That'll Invest in My Company

Teaching Assistant, Some Class Where I Kinda Just Debug Code

Skills

Node.js, Angular, React, "Machine Learning," Blockchain, Microsoft Word, Stack Overflow, Being a Rockstar, Typing Over 60 Words Per Minute, HTML, CSS

Experience

My Own Super Awesome Startup Right Now

Founder and CEO

- This startup will change the world. PLEASE EMAIL IF YOU WANT TO GIVE ME MONEY AND WE ARE HIRING. <3
- Here's some Programmer Ipsum. Ethernet always wins. Syntactic sugar. Don't treat a semi colon as the end of the line, but rather as a possibility of a new beginning. Pass the array size in C. I'm moving to the bay area.

Some Decent Startup The Past

Something

Here's some more Programmer Ipsum. Notepad++, Sublime, Vim, Emacs, Atom, Brackets. try, catch, finally. DRY up your code. Real programmers don't document. If it was hard to write, it should be hard to understand. Given enough time, I can meet any software deadline.

Some Decent Startup The Past

Something

Here's even more Programmer Ipsum. C is memory with syntactic sugar. Debugging is like being the detective in a crime movie where you are also the murderer. Merge sort, quick sort, bubble sort, bogo sort, tim sort. How many Javascript frameworks are there? A SQL statement walks into a bar and sees two tables. It approaches, and asks 'may I join you?'

Some Decent Startup The Past

Something

If at first you don't succeed, call it version 1.0. When in doubt, use brute force. Deleted code is debugged code. The best thing about a boolean is even if you are wrong, you are only off by a bit. if, elsif, else, while, do-while, for. // I'll fix this later. Pass the array size in C. It's not a bug - it's an undocumented feature.

Some Decent Startup The Past

Something

Notepad++, Sublime, Vim, Emacs, Atom, Brackets. try, catch, finally. DRY up your code. Real programmers don't document. If at first you don't succeed, call it version 1.0. When in doubt, use brute force.

Projects

Random App (my-cool-app.io)

- Uses 15 APIs.
- Won some pretty cool sponsor prize.
- Has 20 Blockchains and 30 Neural Nets.
